

Family Storm Shelter

SI Precast continues its commitment to manufacture the highest quality precast concrete products and provide concrete solutions with our below-ground storm shelter.

SI Precast Concrete storm shelters are manufactured with 5,000# psi concrete and reinforced with 1/2" rebar on 12" centers combined with 10 gauge steel wire mesh.

Steel stairs and railing are powder coated and an electrical port is provided for wiring. The reinforced steel door is constructed of 12 gauge steel, is powder coated, and has custom-designed, three point latching system with locking device that allows the door to be opened from the inside, even if the door is damaged or locked, providing a sense of security to you and your family.

SI Precast Concrete storm shelters meet the rigid standards of the Federal Emergency Management Agency (FEMA) and also passed the stringent testing of the Wind Institute at Texas Tech University in September 2004.
